

CS471 - Web Technologies (Laboratory)

Lab 5: HTML and CSS (Part 2)

Student Name: Lujain Aljuraybia | Student ID: 432205249
GitHub Repository: <https://github.com/lujain157/CS471-Labs>

1. Introduction

This lab focuses on HTML5 elements, external CSS styling, text formatting, nested lists, and HTML tables, all integrated into a Django web application and accessed through dedicated URL routes.

2. Lab Objectives

- Create links and customize page layout using an external CSS file.
- Apply HTML text formatting elements and style a page heading with CSS.
- Build nested ordered and unordered lists.
- Build simple and complex HTML tables using `rowspan` and `colspan`.

3. Implementation and Results

Task 1 — Links and Layout Customization

Figure 1: Links and layout customization output at /books/html5/links

A webpage with three links to Qassim University was created and styled with the external `main.css` file, using CSS classes and IDs, colors, padding, block display, and different link states. URL: `/books/html5/links`

Task 2 — Text Formatting

Figure 2: HTML text formatting elements at /books/html5/text/formatting

The page demonstrates the HTML formatting elements `b`, `strong`, `i`, `em`, `small`, `mark`, `del`, `ins`, `sub`, and `sup`, with the heading styled using external CSS. URL: `/books/html5/text/formatting`

Task 3 — Nested Lists

Figure 3: Nested ordered and unordered lists at /books/html5/listing

Nested ordered and unordered lists were created across multiple nesting levels under the topic “The Best Features of the Internet”, with the heading styled using CSS. URL: </books/html5/listing>

Task 4 — Tables and Layout Customization

Figure 4: Fruit price table and camelid comparison table at /books/html5/tables

A fruit price table with a calculated total of \$3.75 and a more complex camelid comparison table were created using `rowspan` and `colspan`, including a desert image inside the table, with layout and styling handled by external CSS. URL: </books/html5/tables>

5. Conclusion

This lab provided practical experience with HTML5 elements, external CSS styling, Django templates and URL routing, and webpage layout customization through links, text formatting, nested lists, and tables.
